It is certified that error appears in the above-identified patent and that said Letters Patent is hereby corrected as shown below:

COLUMN 6:

Line between 28 & 29, after the line "Hereunder is a detailed description of the winding." Replace the following paragraph:

"Moreover, by bending from the inner peripheral side of the hollow cylindrical body to the outer peripheral side thereof, the one set of two sides 39 can be arranged on the outer peripheral side, and the other set of two sides 41 can be arranged on the inner peripheral side. Consequently, the wire sheaves 27 can be arranged evenly and close together on both the inner peripheral side and the outer peripheral side of the hollow cylindrical body."

with the following paragraph:

--FIG. 3 shows a condition where the hollow cylindrical shaped stator winding 15 has been developed into a plane. This band shaped winding 15 developed into a plane 20 comprises a plurality of coil segments 23. The coil segments 23, in the present embodiment correspond to a three phase two pole configuration, and hence there are $3 \times 2 = 6$ segments. That is to say, in the case where the rotating electrical machine is an m phase p pole configuration, then $m \times p$ coil segments are used.--.

Line 49, after "direction in the figure", change the comma to a period.

COLUMN 7:

Line 52, between "a band" and "body as shown in" change "shape" to

--shaped--.
